# WELCOME!

## GTO ALUMINUM

Interior & Exterior Wall Cladding

GTO Aluminum is the leading innovator in Aluminum Cladding installation systems, profiles, and technology for both Interior & Exterior design.

A pioneer for both residential and commercial structures. Unlike anything else in the construction and design markets today!

### • UNIVERSAL SYSTEM

Slide-on, tongue and groove installation, fully enclosed with no gaps. Perfect for applications requiring a more waterproof solution.

One portion of the universal profile would be drilled in with screws; as the next profile slides in on top and cover the screws of the one beneath it. This provides a very sleek, sealed, modern, and clean finish.

# A SUPERIOR PRODUCT

THAT GIVES CUSTOMER MORE OPTIONS

Using Aluminum is a better solution for an environmentally sustainable future. It does not rust or swell, its impervious to termites, its fire resistant, therefore great to cover the fireplace or BBQ walls for example, it also requires ZERO maintenance and can handle every climate type. Aluminum is 100% recyclable; that means Aluminum is a forever product. It is so long lasting that 75% of all aluminum ever created is still in use today! Remarkable.

Across all industries, innovators are looking to aluminum for greener, more sustainable solutions - and mostly cost efficiency.

Does not rust or swell.

Impervious to damage from pests such as termites.

Fire-resistant. Safe to cover fireplaces

100% Recyclable & Environmentally Sustainable.

Includes lifetime warranty against water and pests.

Does not require maintenance.

# UNIVERSAL 2+2 PRODUCT OVERVIEW

## Description

The Universal 2+2 seamless design delivers a refined finish for formal environments, measuring 5.51"W x 0.70"H x 19'L with a 0.047" thickness.

## Ideal Applications:

This has a delicate appearance and feel and emulates the same width as the Click 20 profiles. It is fully enclosed and works better for exterior cladding and doors.

## Key Features

- Seamless installation with hidden fasteners.
- Available in a range of wood tones and custom colors.
- Engineered for durability in diverse climates.

## Standard Color Options

## INSTALLATION NOTES

- ONE INSTALLATION FASTENERS IS REQUIRED AT EACH FASTENER LOCATION SHOWN.
- INSTALL INDIVIDUAL INSTALLATION ANCHORS WITHIN A TOLERANCE OF  $\pm 1/2$  INCH THE DEPICTED LOCATION & SPACING IN THE ANCHOR LAYOUT DETAILS (I.E., WITHOUT CONSIDERATION OF TOLERANCES). TOLERANCES ARE NOT CUMULATIVE FROM ONE INSTALLATION ANCHOR TO THE NEXT.
- MINIMUM EMBEDMENT AND EDGE DISTANCE EXCLUDE WALL FINISHES, INCLUDING BUT NOT LIMITED TO STUCCO, FOAM, BRICK VENEER, AND SIDING.
- ANCHORS SHALL BE AS LISTED AND SPACED AS SHOWN ON DETAILS. EMBEDMENT TO BASE MATERIAL SHALL BE BEYOND WALL DRESSING.
- INSTALLATION FASTENERS AND ASSOCIATED HARDWARE MUST BE MADE OF CORROSION RESISTANT MATERIAL OR HAVE A CORROSION RESISTANT COATING.
- INSTALLATION FASTENERS SHALL BE INSTALLED IN ACCORDANCE WITH ANCHOR MANUFACTURER'S INSTALLATION INSTRUCTIONS, AND FASTENERS SHALL NOT BE USED IN SUBSTRATES WITH STRENGTHS LESS THAN THE MINIMUM STRENGTH SPECIFIED BY THE ANCHOR MANUFACTURER.
- INSTALLATION FASTENERS CAPACITIES FOR PRODUCTS HEREIN ARE BASED ON SUBSTRATE MATERIALS WITH THE FOLLOWING PROPERTIES:
  - 2X WOOD FRAMING - MINIMUM SPECIFIC GRAVITY OF 0.55.
  - CONCRETE - f<sub>c</sub> = 3000 PSI
  - MASONRY - CMU PER ASTM C90 MIN. 2000 PSI
  - METAL - 18 GAUGE STEEL, MIN. F<sub>y</sub> = 33KSI
  - ALUMINUM - 1/8" MIN. 6063-T5

# TECHNICAL DATA & CERTIFICATIONS

## PART 1: GENERAL I.

### 1.1 RELATED SECTIONS

- **05 40 00** – Cold-Formed Metal Framing: Metal framing used to support aluminum cladding.
- **07 50 00** – Membrane Roofing: Used in conjunction with roof-related aluminum cladding.
- **07 60 00** – Flashing and Sheet Metal: Components used with aluminum siding.
- **07 46 16** – Aluminum Siding: Specifics for aluminum siding applications.
- **05 50 00** – Metal Fabrications: Involves metal workings that are necessary for structural supports and detailed metalwork integral to aluminum cladding installations.

### 1.2 REFERENCES

- **Miami-Dade County NOA Approval (NOA No. 24-0408.05)**
  - Meets Florida Building Code and High-Velocity Hurricane Zone standards. Large and small missile impact resistant, ensuring durability in extreme weather.
- **Fire Safety Compliance**
  - ASTM E84-24 tested for surface burning characteristics.
- **Class A Fire Rating:**
  - Flame Spread Index (FSI): 0 (Highest fire resistance rating).
  - Smoke Developed Index (SDI): 35 (Universal 4+4) & 30 (Click 180).
- **ISO Standards:**
  - ISO 9001:2015 - Quality Management System.
  - ISO 14001:2015 - Environmental Management System.
  - ISO 45001:2018 - Occupational Health & Safety Management System.
  - ISO 50001:2018 - Energy Management System.

# TECHNICAL DATA & CERTIFICATIONS

## PART 1: GENERAL II.

### 1.2 REFERENCES

- **European Standards / EU Standards:**

- EN 515, EN 573-3, EN 755-2, EN 755-9, EN 12020-2, EN 15088:2005.

- **Testing and Performance Certifications:**

- Resistance to humid atmospheres containing Sulphur dioxide (ISO 22479).
- Acetic acid salt spray resistance (ISO 9227).
- Accelerated weathering test (Solar box, ISO 16474-2).
- Natural weathering test (Florida exposure, ISO 2810).
- Filiform corrosion test (ISO 4623-2).
- Q-SUN XE-3 HS – Accelerated Weathering Test by SUBLITEX.
- AAMA 2605 - highest standard for powder-coated aluminum, ensuring durability and color retention in extreme environments.

### 1.3 SUBMITTALS

- Product data: Submit manufacturer's product literature, specifications, and data sheets.
- Samples: Submit duplicate samples of cladding material, of color and profile specified.
- Shop Drawings: Indicate dimensions, profiles, attachment methods, schedule of wall elevations, trim and closure pieces, soffits, fascia, and related work.
- Certifications: Submit proof of compliance with specified tests and standards.

### 1.4 WARRANTY

- Provide a 20-year limited warranty from the date of Substantial Completion covering manufacturing defects such as warping, corrosion, cracking, chalk resistance, and color retention. Warranty applies only to the original owner and is not transferable.

# TECHNICAL DATA & CERTIFICATIONS

## PART 2: PRODUCTS

### 2.1 ALUMINUM CLADDING AND COMPONENTS

- **European Standards / EU Standards:**

- Profile: Universal 2+2 - 5.51"W x 0.70"H x 19'L | 0.047" thickness
- Material: 6063 Alloy, T5, powder-coated, 18 gauge.
- Finish: Powder-coated in standard and custom colors.
- Colors: Espresso, Oak, Pine, Gray, Charcoal Black, Gloss Black; custom colors available for large orders.

### 2.2 ACCESSORIES

- **Aluminum Furring Strips** - spaced every 24"-36"

- ✓ **Ventilation:** The air gap created by the furring strips acts as a rainscreen, allowing moisture behind the cladding to dry and dissipating heat to reduce temperature buildup on the panels.
- ✓ **Drainage:** Any excess water entering the system can drain downward through the gap, preventing water accumulation.
- ✓ **Thermal Isolation:** The furring strips minimize direct heat transfer from the wall to the cladding, further limiting expansion.
- ✓ **Flexibility:** The furring strips allow the cladding system to move slightly as a single unit, accommodating minor thermal expansion without causing stress points or buckling. By spacing the furring strips every 24 inches, the panels are effectively divided into smaller sections. Each section undergoes less expansion compared to a single long, continuous panel, which helps prevent buckling.
- ✓ **Recommended Tools:** Use a 96 teeth aluminum blade for cuts.

## PART 3: EXECUTION

### 3.1 INSTALLATION

Install according to manufacturer's instructions and approved shop drawings. Maintain joints true to line, tight-fitting, and with a seamless appearance.

### 3.2 CLEANING AND MAINTENANCE

Conduct freshwater cleaning and general maintenance quarterly. Use a soft cloth or brush with mild soap and warm water for routine cleaning. Avoid harsh chemical cleaners and maintain a log of all maintenance activities.

# TECHNICAL DATA & CERTIFICATIONS

## ICC-ES TEST REPORT

### 1.6 Witnessing

No representative of [GTO Aluminum USA](#) witnessed the testing reported herein.

### 1.7 Conditions of Testing

Unless otherwise indicated, all testing reported herein was conducted in a laboratory set to maintain temperature in the range of 65-80°F and humidity in the range of 45-60% RH. All test specimen materials were stored in the laboratory conditioning room of  $73.4 \pm 5$ °F and at a relative humidity of 50  $\pm 5\%$  environment for no less than 24 hours prior to testing. The test specimens were conditioned for **16** days and obtained steady state.

### 2.0 Referenced Standards

ASTM E84-24 Standard Test Method for Surface Burning Characteristics of Building Materials.

### 3.0 Summary of Results

**Flame Spread Index – 0**

**Smoke Developed Index – 35**

### 3.1 General

This fire-test-response standard for the comparative surface burning behavior of building materials is applicable to exposed surfaces such as walls and ceilings. This standard is used to measure and describe the response of materials, products, or assemblies to heat and flame under controlled conditions, but does not by itself incorporate all factors required for fire-hazard or fire-risk assessment of the materials, products, or assemblies under actual fire conditions.

### 3.2 Test Specimens

The samples submitted by the manufacturer was identified as Universal 4+4 Cladding and was supplied in the form of (15) 0.047-in x 4.72-in x 288-in. They were received without damage.

# TECHNICAL DATA & CERTIFICATIONS

## 3.3 Test Setup and Procedure

The product(s) were setup and evaluated in accordance with ASTM E84-24.

<b>Substrate Used:</b>	N/A
<b>Mounting Method:</b>	Standard
<b>Support Used:</b>	Rods
<b>Side Exposed:</b>	Flat Side
<b>Adhesive Used &amp; Coverage Rate (if Applicable):</b>	N/A
<b>Cement Board Used to Cover Sample (Y/N):</b>	Yes
<b>Sample Continuous or Sectioned:</b>	Sectioned
<b>No. &amp; Size of Sections:</b>	(15) 0.047-in x 4.72-in x 288-in
<b>Lab Ambient Temp (°F):</b>	71
<b>Lab Ambient RH (%):</b>	27
<b>Date Tested:</b>	1/24/2025

# TECHNICAL DATA & CERTIFICATIONS

## 3.4 Test Results

TEST DATA	
Time to Ignition (mm/ss):	01:52
Maximum Flame Spread (ft):	0.000
Time to Max Flame Spread (mm/ss):	00:00
Maximum Temperature (°F):	499
Time to Max Temperature (mm/ss):	09:28
Total Fuel Burned (cubic feet):	45.007
Flame Spread*Time Area (ft*min):	0.000
Smoke Area (%A*min):	22.693
Unrounded FSI:	0.000
Unrounded SDI:	33.573

### TEST OBSERVATIONS

01:35	Observed charring and discoloration
07:00	Observed charring on surface increasing

### POST-TEST OBSERVATIONS

0 – 8 ft	Section was charred and discolored
8 – 16 ft	Section was slightly discolored
16 – 24 ft	Section was untouched

### Analysis on Classification Criteria

Based on Flame Spread Index and Smoke Developed Index when tested in accordance with ASTM E84 or UL 723. Three classes of interior finish are specified by the International Building Code (IBC) that describes a set of classification criteria required for interior wall and ceiling finish materials. The classification criteria for all three model codes is the same: ASTM E84 and UL 723 do not include classification criteria for the results obtained from testing.

Class	Flame Spread Index	Smoke Developed Index
A	0-25	0-450
B	26-75	0-450
C	76-200	0-450

## #8 Wood Screw into Mixed Maple-Southern Pine w/ 0.1457 in. of Gap Space.

### GTO Aluminum - Universal Aluminum Siding & CLICK Profile Siding System

Calculations herein are performed in accordance with the National Design Specification for Wood Construction - 2018, Chapter 12.3 and Technical Report 12 - General Dowel Equations for Calculating Lateral Connection Values, published by the American Wood Council

Wood Screw Type = #8 Wood Screw  
 Wood Screw Length = 1.75 in  
 Wood Screw Embedment = 1.50 in  
 Wood Screw Thread Length = 1.17 in  
 D = 0.164 in , Dowel Diameter  
 $D_m$  = 0.131 in , Dowel Diameter at max. stress in main member  
 $D_s$  = 0.131 in , Dowel Diameter at max. stress in side member  
 $F_b$  = 90,000 psi , Dowel bending strength

### Wood Screw Withdrawal Calculations

Substrate: Mixed Maple-Southern Pine

Tabulated withdrawal design value:  $W = 141$  lbs  
 Penetration Factor:  $C_p = 1.17$  in  
 Duration Factor:  $C_D = 1.60$

Withdrawal Allowable (W') = 263.0 lbs

AMERICAN WOOD COUNCIL

## Determine Screwed Connection Tensile Capacity: #8-32 Gr. 5 Self-Drilling Screw

Limit states for screw connection in tension per 2020 Aluminum Design Manual,

### J.5.4.2: Pull-Over

Design Tension Strength and Allowable Tension Strength Shall be determined as follows:

$$\begin{aligned}\Phi &= 0.5 \text{ (LRFD)} \\ \Omega &= 3 \text{ (ASD building-type structure)}\end{aligned}$$

Fastener Type: #8-32Gr. 5 Self-Drilling

### J.5.5.1: Pull-Out

Thickness of member not in contact with head,	Le =	0.125	in.
Nominal diameter of the screw,	D =	0.164	in.
Threads per inch,	N =	32	per inch
Tensile yield of member not in contact with head,	Fty2 =	21000	psi
Tensile ultimate of member not in contact with head,	Ftu2 =	27000	psi
Thread stripping area of internal thread per thread,	TSA (l)	0.01	in.
Coefficient for design per 2015 ADM,	Ks =	1.2	(Not applicable for Le > 0.125)
Thread stripping area of internal thread per unit engaged,	Asn =	0.04	in.

#### Nominal pull out strength.

Use This Value	For 0.060in. $\leq$ Le $\leq$ 0.125 in.	Rn =	516.6	lbs
Not Applicable	For 0.125 in. < Le < 0.25 in.	Rn =	516.6	lbs
Not Applicable	For 0.25. $\leq$ Le < .375 in.	Rn =	78.3	lbs

#### Design Values.

$$\begin{aligned}\Phi Rn &= 258.3 \text{ lbs} \\ Rn/\Omega &= 172.2 \text{ lbs}\end{aligned}$$

### J.5.5.2: Pull-Over

a) The nominal strength  $R_n$  for the limit state of pull-over for non-countersunk screws is:

$$R_n = C_{pov} t_1 F_{ult} (D_{ws} - D_s) \quad (J.5-8)$$

Coefficient for valley vs crown fastening,

$$C_{pov} = 1$$

Nominal thickness of part in contact with screw head,

$$t_1 = 0.0472 \text{ in.}$$

Tensile ultimate of part in contact with screw head/washer,

$$F_{ult} = 27000 \text{ psi}$$

Larger diam. of screw head or washer,

$$D_{ws} = 0.438 \text{ in.}$$

Nominal diameter of hole in material under screw head,

$$D_s = 0.1405 \text{ in.}$$

#### Nominal Strength.

$$R_n = 379.134 \text{ lbs}$$

#### Design Values.

$$\Phi Rn = 189.567 \text{ lbs}$$

$$Rn/\Omega = 126.378 \text{ lbs}$$

# TECHNICAL DATA & CERTIFICATIONS

AMERICAN WOOD COUNCIL

## E4.4.1 Pull-Out Strength: #8-32 Gr. 5 Self-Drilling Screw - Frame Installation

Reference: AISI Cold Formed Steel Specifications, E4.4.1

### E4.4.1 Pull-Out Strength [Resistance]

The nominal pull-out strength [resistance],  $P_{not}$  shall be calculated as follows:

$$P_{not} = 0.85 t_c d F_{u2} \quad (\text{Eq. E4.4.1-1})$$

Same formula is referenced in AAMA TIR A9-14 for thickness of 1/4" or less.

Figure 1: Typical Connection Detail

Where,

Nominal screw diameter,

$$d = 0.164 \text{ in.}$$

Thickness of member in contact with screw head,

$$t1 = 0.051 \text{ in.}$$

Thickness of member not in contact with screw head,

$$t2 = 0.0478 \text{ in.}$$

Tensile strength of mem. not in contact with screw head,

$$F_{u2} = 58000 \text{ psi}$$

$$\text{Eq. E4.4.1}$$

$$P_{not} = 386.473 \text{ lbs}$$

Per ASD,

$$\underline{P_{ns}/\Omega = 128.824 \text{ lbs, } \Omega = 3}$$

Per LRFD,

$$\underline{\Phi P_{ns} = 193.236 \text{ lbs, } \Phi = 0.5}$$

## E4.4.2 Pull-Over Strength

Reference: AISI Cold Formed Steel Specifications, E4.4.2

$$P_{nov} = 1.5 * t1 * d'w * F_{u1} \quad (\text{Eq. E4.4.2-1})$$

Where,

Thickness of member in contact with screw head,

$$t1 = 0.0472 \text{ in.}$$

Tensile strength of mem. in contact with screw head,

$$F_{u1} = 27000 \text{ psi}$$

Effective Pullover Diameter,

$$d'w = 0.438 \text{ in.}$$

$$\text{Eq. E4.4.2-1}$$

Per ASD,

$$\underline{P_{ns}/\Omega = 279.094 \text{ lbs, } \Omega = 3}$$

Per LRFD,

$$\underline{\Phi P_{ns} = 418.64 \text{ lbs, } \Phi = 0.5}$$

## Check Tensile Capacity of Screw.

#8-32 Gr. 5 Self-Drilling Screw,

$$D = 0.164 \text{ in.}$$

$$\underline{P_n/\Omega = 560 \text{ lbs, per AAMA TIR A9-14}}$$

**Design Value**

$$T = 128.824 \text{ lbs}$$

1. Tabulated Ultimate load values are for anchors installed in uncracked concrete. Concrete compressive strength must be at the specified minimum at the time of installation.
2. Allowable load capacities listed are calculated using an applied safety factor of 4.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as lift safety or overhead.
3. Linear interpolation may be used to determine allowable loads for intermediate compressive strengths.
4. For lightweight concrete multiply tabulated allowable load values by a reduction factor of 0.60.

1. Tabulated load values are for anchors installed in minimum 8-inch-wide, Type II, light weight or normal weight concrete masonry units conforming to ASTM C90 that have reached the minimum design ultimate compressive strength at the time of installation ( $f'_{m} \geq 2,000$  psi). Mortar must be Grade N.S or M.

2. Allowable load capacities listed are calculated using an applied safety factor of 5.0. Consideration of safety factors of 10 or higher may be necessary depending on the application, such as life safety or overhead.

3. Allowable shear loads into the face shell of a masonry wall may be applied in any direction.

4. The tabulated values are applicable for anchors installed into the ends of concrete masonry units (e.g. wall opening) where minimum edge distances are maintained.
